publicrelations@WooshCom.com**Leading Cable Operators deploy WooshCom®'s Unique Adapter**

WooshCom® Corporation announced the first shipments of its unique DHEI to ASI Interface Adapter. Initial customers include AT&T Broadband, Time Warner Cable, Comcast Cable Communications, and Cox Communications. This innovative product converts MPEG-2 transport streams from Motorola's proprietary DHEI to the world standard interface – DVB-ASI.

The product's small size allows it to be installed in a rack's cable space directly behind such legacy equipment as Motorola's IRTs. This breaks the 12' DHEI barrier and provides all the flexibility of the highly compatible ASI signal which can be run hundreds of feet.

Remultiplexers may now be placed anywhere in the headend that space is available. This saves the costs of the labor intensive reshuffling of headend equipment, and reducing the potential for the disruption of services to the subscriber.

“Cable operators can future-proof their remuxes by deploying them with all ASI inputs today and save thousands of dollars on future upgrades to replace out-dated DHEI ports as DHEI fades away,” says Mr. Marler, Founder and CTO of WooshCom.

Innovative topologies that make maximal use of an IRT's internal decryption and encryption engines are now feasible for implementing low cost high definition solutions because WooshCom's adapter makes the internal streams within a Motorola IRT more accessible.

About WooshCom[®]

WooshCom[®] Corporation provides innovative products to make MPEG-2 interfacing flexible and seamless. WooshCom[®] has been supplying such solutions to the cable television and satellite industries since 1995. WooshCom[®], a privately held firm, is headquartered in Denver, Colorado, and can be found on the web at www.WooshCom.com.
